QUESTIONS TO CONSIDER BEFORE SUBMITTING

- Will the increased discharge cause erosion and channelization?

- Is there potential for off-site flooding?

- Does the decreased infiltration in the drainage area cause vegetation stress due to reduced or increased ground water or surface water discharge into wetland?

- Will the nutrients in the runoff increase eutrophication potential in downstream water bodies?

- Do you own any adjacent parcels or easements for roadways across adjacent parcels which could be used for access to avoid a wetland crossing

- Does a wetland crossing occur where it will result in the least amount of alteration to a wetland?

- Is preservation of upland areas adjacent to the impacted wetland a priority?

- Can using an alternative crossing design such as a bridge, retaining wall, etc. decrease the width or area of wetland alteration?

- Does a proposed road crossing of a wetland exceed the minimum width acceptable to the Planning Board and can this be negotiated downwards?

- Have you established that no reasonable alternative access from a public way to an upland is possible?

- Can the parking lot spaces be decreased?

- Is the roadway designed in such a way that does not restrict the flow of water?

- Is additional information needed to assess water quality impacts due to runoff?

- Is there an increase in other pollutants (e.g., heavy metals, turbidity, coli form) from streets and parking lots?

- Is there a need to restrict or prohibit the use of pesticides and fertilizers?

- Is there a need to restrict the use of roadway salting?
